

CONTINUED GROWTH

Calls For Expansion

Due to continued growth in the field of metering services, North American Services Group and Canadian Meter Company have moved their headquarters to a new facility.

Ontario Facility

Cambridge Facility

275 Industrial Road
Cambridge,
Ontario N3H 4R7
Canada
Phone:

Fax:
519-650-197

Along with their plants in Edmonton, Alberta and Cartersville, Georgia, you can now find NASG/CMCO at their new shared-services location in Cambridge, Ontario. NASG is the largest meter service provider in North America and was formed to meet the needs of the ever-changing North American natural gas utilities market. NASG has full-service facilities where all programs are performed under one roof to maxi-

ze the customer's purchasing, manpower and logistical resources. NASG offers a complete "cradle to grave" approach to meter management. The comprehensive nature of the programs ensures that "remetering" plays a significant role in reducing the Total Cost of Ownership ("TCO") of the customer's metering assets.

One of the most successful programs that NASG provides is "Remanufacturing". This process utilizes the refurbished meter case, but is rebuilt using all new O.E.M. or equivalent parts and includes a full factory warranty. Other programs offered are "Reverify", "Refurbish", "Refurbish Plus", Metrology Services, Meter Asset Management, Customized Prover Software, On-Site Measurement Training and Meter Shop Consulting.

NASG brings together the measurement and control, engineering, manufacturing and information systems expertise of both the American Meter and Canadian Meter group of companies to provide an unparalleled value proposition to North American utility companies.
