

# New Products, Solutions, and Innovations – for a Changing Natural Gas Industry

The ELSTER-AMCO group as the worldwide leading supplier for gas measurement and regulation equipment to the gas industry have always had the strategy to offer our customers application-driven, innovative products and solutions.

Being an internationally active group we are always challenged with a wide variety of applications on account of a variety of different standards and specifications. With skilled organizations and highly professional engineers around the world we are very close to the markets and our customers.

The continuing deregulation and privatization of the energy markets in general and the gas distribution and transmission markets in particular are changing our industry in a dramatic way. Especially the need for data logging, data communication, and data evaluation between the point of measurement and the billing or SCADA systems are playing a key role for the gas transmission and distribution companies to fulfil the needs of the future.

Environmental programs, often politically driven based on the need to reduce CO<sub>2</sub> emissions are the main reason for moving over to natural gas. In several countries these changeover programs give significant tax incentives for turning to natural gas solutions. Rising energy costs are increasing the need for cost savings and more efficient processes. Improved measurement will help manage the energy bill for the end users and show the positive aspects of natural gas solutions.

The ELSTER-AMCO group is taking up these changes and challenges with new and innovative products and applications. Good examples are the compact rotary meter, the continuous mechanical temperature corrector for rotary meters, a new generation of volume correctors, the new TRACE VRT® transponder for automated meter reading and data communication systems.

The development of new technologies into very innovative products like the Infrared spectroscopy as a new method to determine gas quality and composition may revolutionize this application in the future.

We want to give you as our customers an insight into the activities and capabilities of the ELSTER-AMCO group worldwide. Besides the innovation, the quality and reliability are inherent characteristics of our products and solutions.

We are looking forward to a long term, successful cooperation.

Jost Körte
