

ELSTER-AMCO GAS METERS

Qualified for service in Antarctica

Since PREMAGAS s.r.o. has been a member of the ELSTER-AMCO group, we have delivered our gas meters all over the world. Our MKM diaphragm gas meters have even been in service in Antarctica.

Some time ago we were asked by Mr. Stewart Whittlestone from the Australian Nuclear Science and Technology Organisation to supply three gas meters (6 m³ per hour) which would be able to work in the Antarctic at temperatures as low as -40°C.

We took his request as a challenge. After we had supplied our gas meters and after they had been in service for some time, we received an e-mail from Stewart Whittlestone with the following product evaluation:

“The gas meters have performed extremely well, and I am very happy to recommend them to any other Antarctic researchers.”

It was for us an encouragement for the future and perfect proof of the quality of our meters.
