

SINGAPORE POWERGAS

Another Satisfied Customer

At present, two gas systems exist in Singapore: the manufactured town gas system and the natural gas system. Town gas is produced locally and supplied to over 500,000 domestic, commercial and industrial consumers. Natural gas, on the other hand, is imported from the neighboring countries of Malaysia and Indonesia. Plans are currently in place to convert the entire town gas network in Singapore to eventually serve only natural gas.

As Singapore's oldest and most established gas company, PowerGas has a wealth of expertise that comes from more than 140 years of pioneering in the Singapore gas industry. Through recent restructuring of the local gas industry, PowerGas has taken on the role of the sole Gas Transporter and System Operator in Singapore. Today, PowerGas manages an extensive 2,800 km gas transmission and distribution network island-wide, and is consistently committed to providing a safe and secure infrastructure for gas transportation in Singapore.

ELSTER's relationship with PowerGas began way back in 1987 when it won a tender to supply approximately 3000 units of the G4 diaphragm meter. These diaphragm meters are used in commercial premises, primarily restaurants and Singapore's iconic hawker centres. Subsequent years saw ELSTER winning further tenders for the supply of both the G4 and G10 meters. Since then, ELSTER's position has grown in strength and we currently stand as the primary supplier of the G10 diaphragm meters to PowerGas.

Besides the diaphragm meters, PowerGas also consistently purchases the ELSTER-JEAVONS J123 and J125 Gas Governors for their distribution skids installed all over Singapore. Both Gas Governors have constantly provided PowerGas with high performance and reliability in their operation.

Through the superior quality of ELSTER-AMCO's range of products and our reliable after-sales support, PowerGas has consistently been a satisfied customer. Our objective is to serve PowerGas on an even larger scale in the future and to continue our penetration of the household meter market.
