

## SINERGY 2003 IN RIMINI

# “Nuovi orizzonti con Elkro Gas”

This year's SINERGY trade fair took place in Rimini in November, and ELSTER-AMCO was represented by Elkro Gas under the slogan 'New horizons with Elkro Gas'. With this slogan, the ELSTER-AMCO Group, and in particular Elkro Gas, once again underlined their commitment to innovative, new products and efficient services for their customers. The fair proved to be a great success and was just reward for the terrific effort everyone involved in the company has shown over the last year or so.

The new EK210-230-260 volume correctors and the system of meter reading via the GSM network was displayed at our stand and met with great interest on the part of the visitors. Further displays included the new compact diaphragm meter G40-65 and the mini rotary meters, which impressed the visitors every bit as much. Another big hit was the ELSTER encoder index, a product which has further helped to strengthen ELSTER's reputation in the gas world.

The Perfection products, which have only recently been introduced to the Italian market, are also well on their way to gaining a respectable market share in Italy.

We were delighted to see a constant flow of visitors, including both gas distributors and station builders, as well as some of our long-standing customers. We are always interested in hearing what our partners and customers have to say.

The overall reaction to our stand was extremely positive, which is a further confirmation of the positive attitude towards Elkro Gas.
