

EXHIBITION: NOVEMBER 1 – 6 IN BEIJING

GAS CHINA 2004

In the field of gas, China is one of the fastest growing countries in the world. In recent years, five trunk gas pipelines in excess of 1000 km have either been completely built or are in progress.

The most remarkable of them all is the 4000 km long West-East-Pipeline Project, which has been designed to transmit more than 12 billion cubic meters of natural gas annually to the Eastern industrial region. This is a great business opportunity and is one of the main reasons for the participation of hundreds of international and local gas companies in this year's GAS China 2004. The International Exhibition of Coal Gas, LP Gas and

Natural Gas Technology and Equipment – GAS CHINA 2004 – will surely be the largest gas industry exhibition in China this year, and it is also the most important showcase to display the latest and most advanced technology and equipment. More than ten thousand professional visitors are expected to attend the fair.

ELSTER-AMCO would like to take advantage of this opportunity to show our range of products and meet new and old customers in the course of the fair. We look forward to seeing you at our booth at GAS CHINA 2004.
