

M2R APPLICATION IN AUSTRALIA

Modern – Compact – Flexible

The M2R Medium Pressure Two Stage Regulator is a light weight, compact, flexible model with multiple-connection capability and is designed to meet the varying requirements of international markets.

It is with this design philosophy in mind that AMPY Email Metering encouraged Agility Services, the service arm of AGL (Australian Gas Light), to incorporate the M2R Regulator in their new and innovative meter kit.

The Agility Services meter kits are pre-assembled and tested prior to despatching for field installation, which eliminates previous on-site assembly and service issues.

The right-angled M2R regulator forms an integral part of the kit and is supplied as an OPSO only version, with a UV resistant reset button, fittings and with the OPSO and outlet pressures pre-set. The M2R has excellent outlet pressure control stability over a wide inlet pressure range of 40 to 515 kPa. This special configuration reaches a maximum flow capacity of 40 m³/h in a range of 200 to 515 kPa.

With its compact design and a high flow capacity the M2R has given us the opportunity to create a modern and compact meter kit.
