

Under a new roof

A lean organisation does not necessarily mean you have to lay off people. In search for more productivity and efficiency, Magnol stopped the stamping and powdering of its meter housings two years ago. This is now being done by our sister company Premagas (Slovakia). By doing so, the company managed to save a lot of space and was able to move from a 12,000 square meter location in Noisy-le-Grand to a much smaller one (5,000 square meters) in Lognes.

The new plant will continue to assemble and calibrate residential and commercial meters. A brand new calibration facility, equipped with the latest technology, has been installed in order to offer Magnol's customers the best possible service and products.

The production of cabinets has also been reorganised in order to be more efficient. As of October 4th, the complete production and office workers were moved and production is now running smoothly. Both locations are 6 km apart, which is convenient for all employees and has made the move a lot less stressful than this kind of operation can potentially be.

Of course, a lot of details still need to be sorted out but we can wish Magnol the best of luck in their new building and we await a grand opening ceremony, which should take place some time in the spring.

Magnol can now be reached at:

12 rue des Campanules
ZAC des Mandinets
F-77437 Lognes Cedex 2
