

# North Sea Flow Measurement Workshop 2008

The 26<sup>th</sup> International North Sea Flow Measurement Workshop took place in St. Andrews, Scotland, from Tuesday 21 October to Friday 24 October 2008.

Organised by TÜV NEL the event was very popular. Demand from exhibitors was so high this year that within days of advertising, the original allocation of exhibitor space was fully booked. TÜV NEL had to apply for extra space in order to accommodate everybody.

Elster Instromet participates in the NSFMM on an annual basis. The workshop shares industry knowledge from global research & development and also improvements to design and techniques, relevant to the safe and accurate measurement of gases and oil.

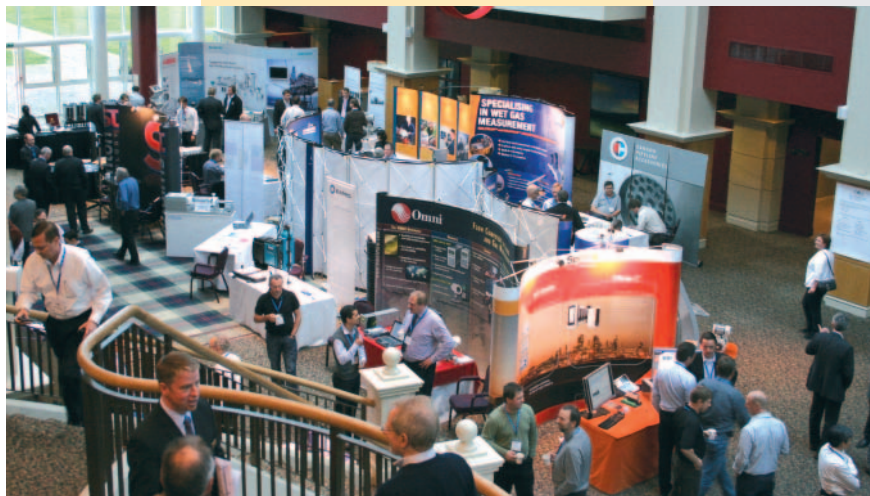

customers will benefit from lower uncertainty levels and lower maintenance costs.

### Elster Instromet UK seminars

Elster Instromet has held some other technical seminars in the UK during 2008. In April 2008, EI UK held a seminar to launch the EnCal 3000 and gas-lab Q1 natural gas analysers. This was held at The National Space Centre in Leicester, UK. Then in September 2008 EI UK held a USM seminar to discuss recent develop-

31 exhibitor companies including Elster Instromet, provided displays and there were 311 delegates in attendance from all around the globe.

The Integrated Metering Solutions group of Elster Instromet continues to provide high integrity and quality gas measurement and analysis solutions where the

General exhibition view

The standard of the technical papers presented this year, was exceptionally high and Elster Instromet would like to congratulate the winning paper: "Features of Allocation Systems Incorporating Long Pipelines" – presented by Philip Stockton of Smith Rea Energy Limited, was the winner. Well Done to Philip.
